Techniccol Hosting
Hosting Pricing Policy

Techniccol Hosting offer products and services to businesses. Some packages have set prices, while others are priced uniquely depending on the requirements. This document will outline what is included in what Techniccol Hosting offer.

1. Packaged Solutions

    1.1. A packaged solution is a total application that includes:

        1.1.1. An application based on one of Techniccol Hosting 's frameworks

        1.1.2. A custom server dedicated to the package

        1.1.3. A Service Level Agreement (SLA) based on a plan to support the application

    1.2. A package solution is contract based with a minimum period of 12 months, renewed each year

    1.3. The current price for each of our packages is available on our website https://techniccolhosting .com/services

2. Business Applications

    Business applications design and development is quotations base and requires a Statement of Requirements (SOR) either provided or this can form part of the pre quotations activity. Creation of an SOR is implemented as a separate purchase order to that of the design and development, the cost of providing an SOR is based on a day rate submitted in the quotation.

    Techniccol Hosting supports a number of software applications for their customers. These applications have significantly improved the way the business performs delivering greater efficiency and customer service. These applications have focused on:

    2.1. Procurement supply chain to include the creation of a preferred supplier register, vendor quotation management and acceptance, purchase approval processing from initial field requests to purchase orders, Goods Receipt and inventory creation.

    2.2. Manufacturing Quotation. This is based on a material Take off List that then integrates the vendor quotation requests applying the markup for the quotation, vendor quotes can be converted to purchase orders on acceptance of the quotation by the customer.

    2.3. Asset Management via Deployment and Maintenance. This manages all certification related to an asset utilizing the inbuilt maintenance scheduling tool which also includes storage maintenance, planned and unplanned maintenance. The application can also provide a cost estimate for remedial labour and parts.

    2.4. Timewriting and Labour Assignment. This application assigns employees to specific job and records the time spent, the application collates the data into reports applying the cost and measuring it against the quotation values to ensure that there is no overrun. There is also an automated invoicing option for sub-contractors based on their timesheet. Customer invoices can be created from the time sheets using the contracts tool in which the sellout rates are set.

    2.5. HR Competency Management. This was first developed for the offshore industry sector to monitor and manage the certification requirements of the energy industry sector, this has now be created as a package and is available under Techniccol Hosting Packages. This tool is a highly flexible software framework and can be simply integrated into other HR platforms and converted to monitor and manage a wide spectrum of resources.
